EXPAND YOUR VIEW

Breathe new life into any room and create a striking, one-of-a-kind focal point with Window World's 6000 Series Bay and Bow windows. Choose a graceful 3-Lite Bay or a sweeping 3, 4, or 5-Lite Bow and enjoy outstanding craftsmanship that makes every space feel larger and more airy.

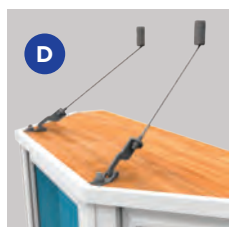

Bay windows are crafted from three windows fixed together at precise 30° or 45° angles, while Bow windows combine three, four, or five windows mullered in gentle 10° curves. Both styles are available in Double-Hung, Picture, and Casement window options and are built to your exact custom size specifications. With meticulous attention to fine details and advanced manufacturing techniques, our 6000 Series Bay and Bow windows uphold Window World's stringent reputation for exceptional quality. The result is truly remarkable windows that transform your view and your home.

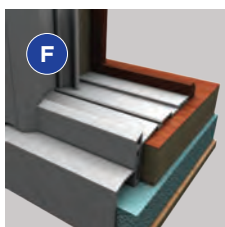

Interior of 3-Lite Bay Window Unit with Light Cherry interior and recessed lighting. Picture window and Casements with Cherry interior and tan hardware.

BAY & BOW WINDOW FEATURES

- A** Premium-grade hardwood plywood construction is strong and resilient.
- B** The insulated solid mullion provides structural stability, as well as eliminating condensation.
- C** Continuous all-thread rods prevent warping and sagging.
- D** Industry leading cable hanger system prevents the unit from slipping over time.
- E** Real wood interior trim adds traditional richness.
- F** Offset insulated sill design adds depth to the window unit's exterior appearance.

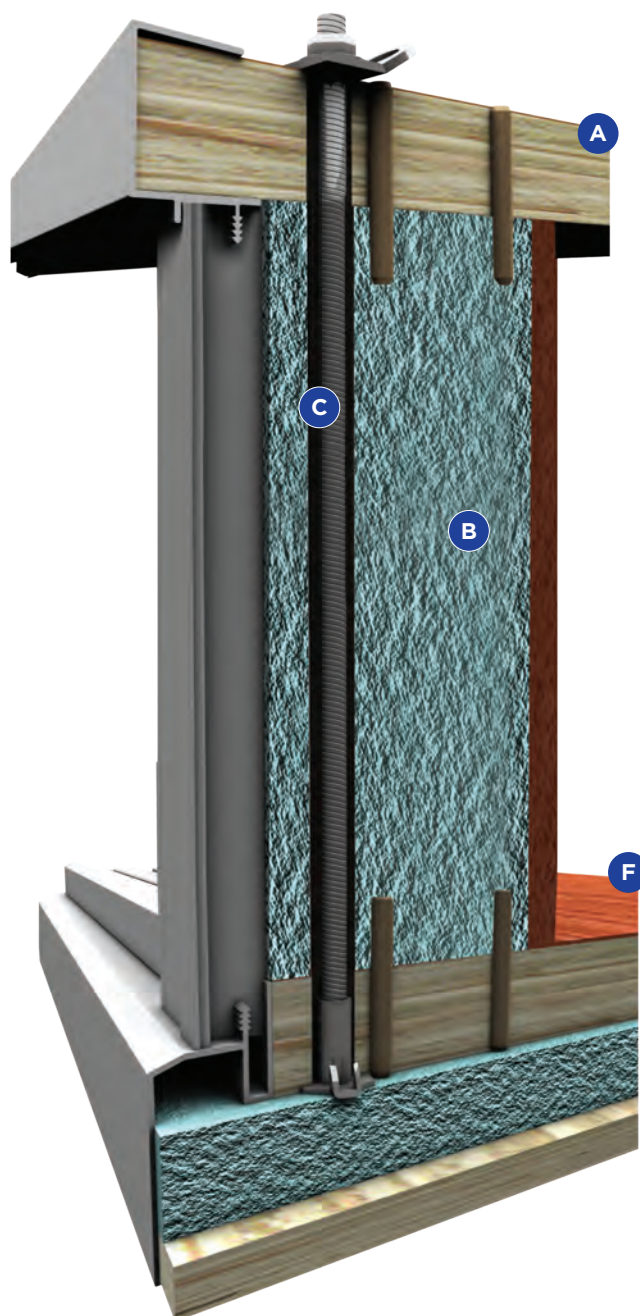

Zero-slip Cable Hanger System

Insulated Sill

Exterior knee braces add additional support and create a traditional exterior look.

DUAL MULLION SYSTEM

Ordinarily, projection windows are constructed using hollow vinyl mullions and an all-thread, or a solid wood mullion connected by lag bolts, screws or clips. Window World's projection windows are manufactured using a dual-mullion system that merges the strength of a steel rod mullion with the benefits of an insulated solid mullion. This results in a 58% weight reduction, improved insulation, as well as resistance to warping, twisting and swelling when exposed to moisture. The benefits add up to long-term stability without the drawbacks of conventional fastening methods.

MOISTURE-RESISTANT FILLER

Our dual mullion system not only provides unprecedented structural stability to the frame but also acts as a true moisture resistant filler. It effectively eliminates condensation associated with ambient air and serves as a non-conductive thermal break.

OFFSET SILL DESIGN

The offset sill design creates an overhang that deflects water away from the unit and eliminates the need to install the mullion exterior cladding over top of exterior nose molding. The look of this design greatly enhances the aesthetic value of any projection window.

OPTIONAL SOLARZONE® GLASS

Windows for Bay and Bow frames are available with SolarZone® Insulated Glass Packages. Low-E coating and Argon gas optimize energy efficiency, reducing heating and cooling costs and maintaining year-round comfort. In cold weather, they retain heated air, and in warmer months, they minimize solar heat gain, keeping your home cool.

INTERIOR LAMINATES

Wood frames, head and seat boards can be finished with laminate for increased durability.

PAINTED & STAINED INTERIORS

A selection of hand-applied stain finishes is available for wood frames, head and seat boards. All are factory applied to ensure the finishes are deep and even. Wood frames, head and seat boards can also be painted. White is standard, custom colors are available.

SOLID SURFACE SEAT BOARDS

Waterproof, 1/2" thick solid surface seat boards are also available in six colors.

RECESSED LIGHTING

Available in three colors, recessed lighting can either be hard-wired or have a plug-in application. LED bulb options are also available.

INTERIOR TRIM PACKAGES

Choose from five trim packages. Each is available in your choice of stains.

INTERIOR TRIM PACKAGES		
PACKAGE	STYLE	DESCRIPTION
A	COLONIAL	EXTENDED SILL WITH MITERED CASING
B	COLONIAL	EXTENDED SILL WITH ROSETTES
C	COLONIAL	EXTENDED SILL WITH HEADER
